

ABSTRACT

A ready-to-be-filled container (1) and a method of producing same

5 A ready-to-be-filled container (1) intended for producing a dispenser for a product such as a cosmetic product, a perfume or the like, comprising

means (9) for containing the product, having a product filling opening (16) and a product dispensing opening (18);

10 means (3) for dispensing the product, such as a pump, mounted on the means (9) for containing the product and responsive to control means (34);

means (20) forming an external casing, made from plastics material, for the means (9) for containing the product and for  
15 the means (3) for dispensing the product, with which the control means (34) are associated, having a product dispensing aperture (31) matching the outlet for the means (3) for dispensing the product, and an opening (39) for mounting the container (1);

20 the product filling opening (16) being intended, in the dispenser (2), to be closed by closure means (40);

the container (1) thus being ready to be filled with the product and then closed by the closure means (40) in order to form the dispenser.
